

Growth & Retention Strategy Brief

Why customers choose us, how we reach them, and what keeps them.

Why They Choose Us

The emotional and rational sale

The core hook is fear reduction. Venue owners live with a low-level dread of EHO inspections. Pelikn turns "am I compliant?" from a gnawing uncertainty into a one-tap PDF export.

EMOTIONAL

Peace of mind

Pass your next EHO inspection. All records captured automatically, audit-ready PDF in one tap.

RATIONAL

Replaces 3+ tools

Paper logs + spreadsheet rotas + timesheet apps — gone. One PWA, no App Store needed.

FINANCIAL

£5/month entry point

Cheaper than a compliance binder refill. No per-user fees. Less than £1/day for Pro.

COMPETITIVE

UK-specific by design

EHO, FSA, Natasha's Law, HACCP — built for British venues, not a generic US SaaS.

How We Approach Them

Segment by urgency, not size

SEGMENT	TRIGGER	LEAD WITH
Pre-EHO panic Inspection coming up	Fear of failure	Audit-ready PDF in one tap. 15-min setup. → Starter
Post-EHO failure Just got a bad score	Shame + urgency	"Never fail again." Compliance-first → upgrade path
Rota chaos Growing team	Spreadsheet pain	AI rota builder + shift swaps → Pro from day one
Multi-site ops 2+ venues	No unified view	HQ dashboard + £15/extra venue. Biggest LTV.

Google Ads on "EHO inspection checklist"

- Captures intent at the moment of panic — highest-converting traffic you can buy.

Instagram / TikTok for hospitality owners

- Short demo videos: "Watch us pass an EHO audit in 30 seconds." Shareable and cheap to produce.

EHO consultants & food safety trainers

- They recommend tools to every client they train. One referral partner = dozens of signups.

Local hospitality Facebook groups

- Tight communities where owners share recommendations. Word of mouth travels fast.

QR table cards as a Trojan horse

- Customers scan allergen QR codes and see "Powered by Pelikn." Every diner is a potential referral.

How We Retain Them

Built-in gravity at every layer

1

Daily habit formation

Temperature logs, opening/closing checklists, and cleaning schedules mean staff use the app every single shift. Muscle memory within a week.

2

Compliance lock-in

Once you've passed an EHO inspection using Pelikn's records, switching means rebuilding your entire compliance paper trail. Nobody does that voluntarily.

3

Operational gravity (Pro)

Rota + timesheets + training + time-off in one place. Switching costs compound with every week of data stored.

4

Multi-venue gravity

A 3-site group at £55/month has all cross-venue compliance and staffing in one dashboard. The switching cost is enormous.

5

Push notifications

Training certificate expiry alerts, rota changes, and time-off approvals keep the app present even on quiet days.

OPPORTUNITIES TO STRENGTHEN RETENTION

Monthly compliance score email

"Your venue scored 98% this month." Creates a feedback loop owners would miss if they cancelled.

Staff-side value

If staff love shift swaps and time-off, they become internal advocates who resist a switch.

Year-over-year EHO readiness trend

"You're more compliant than 6 months ago" validates the subscription cost every renewal cycle.

QR allergen page as referral engine

Add a subtle "Get this for your venue" CTA on every public allergen page.

Sell on fear (EHO inspection) → **Onboard on simplicity** (15-min setup, no app store) → **Retain on daily habit + data gravity.**
