FEATURES & COMPETITIVE ADVANTAGE

Everything your venue needs. Nothing it doesn't.

SafeServ replaces five separate tools with one platform designed for the realities of independent hospitality.

FOOD SAFETY & COMPLIANCE

Inspection-ready. Always.

Every check timestamped. Every corrective action logged. Every fridge monitored. No more scrambling before inspections.

Fridge Temperature Logging

Staff log fridge temps from their phone. Out-of-range readings trigger corrective action workflows.

- Multi-fridge dashboard with live status
- Historical logs with date range filtering
- Colour-coded safe/warning/danger
- Auto-triggered corrective actions

Cooking & Hot Holding Temps

Record cooking temperatures, hot holding checks and cooling logs. Full HACCP traceability.

- Cooking temp records by food item
- Hot holding at configurable intervals
- Cooling log: cook to storage
- Probe calibration records

Cleaning Schedules

Daily, weekly and monthly cleaning tasks. Staff mark completion. Managers see what's done and overdue.

- Configurable frequencies
- Assignable to staff or roles
- Photo evidence capture
- Overdue task alerts

Corrective Actions (HACCP)

Captures what happened, what was done to fix it, and who signed off — the exact trail EHOs want.

- Auto-triggered from out-of-range readings
- Manager sign-off workflow
- Full audit trail with timestamps

Allergen Management + QR

Register menu items with 14 EU allergens. Generate QR codes for customers to self-check before ordering.

- All 14 EU allergens with visual icons

Delivery Checks

Log delivery temperatures, check supplier details, flag issues at point of receipt.

- Temperature checks at delivery

- Searchable food item registry
- Customer-facing QR code pages

- Supplier and product tracking
- Reject/accept with reasons logged

WORKFORCE MANAGEMENT

Build rotas in minutes, not hours.

Smart scheduling, real-time attendance tracking, and labour cost visibility.

AI-Assisted Rota Builder

Set constraints — minimum staff, required roles, closed days — and let SafeServ generate an optimised rota that respects availability and budget.

- Fill gaps mode or full rebuild mode
- Respects time-off & unavailability
- Role-based staffing requirements per day
- Break cover scheduling for lunch periods
- Preview with cost estimate before saving
- Remove shifts from preview before applying
- Fair hour distribution across team
- Real-time labour cost calculation

PIN Clock In/Out

No hardware needed. Break tracking built in. Late arrival detection with configurable thresholds.

Timesheets & Labour Costs

Real-time paid hours with break deductions. Per-staff breakdowns. CSV export for payroll.

Shift Swaps & Time Off

Staff request from the app. Managers approve with a tap. Push notifications keep everyone informed.

DAILY OPERATIONS & PLATFORM

Run your venue, not your admin.

Checklists, tasks, training, waste logging — and a platform that adapts to your venue type.

Opening & Closing Checklists

Configurable checklists staff complete at open and close. Never miss a step.

Task Management

Create and assign tasks. Track completion. Flag overdue. Keep the team accountable.

Waste Logging

Record waste by category, quantity and reason. Identify patterns and reduce cost.

Venue Type Presets

New venues pick their type during onboarding and get pre-configured features. A coffee shop doesn't need hot holding logs. A restaurant doesn't need cellar temps.

- ☕ **Cafe** — Fridges, cleaning, allergens
- 🍺 **Pub** — Cellar temps, rota, deliveries
- 🍽️ **Restaurant** — Full HACCP, team management
- 🏨 **Hotel** — All features, multi-department

Granular Staff Permissions

13 individual permissions across 3 categories. Give your head barista shift-swap approval without full manager access.

COMPLIANCE

COMPETITIVE COMPARISON

One platform vs five point solutions

SafeServ is the only platform combining food safety compliance and workforce management at indie-friendly pricing.

WHY SAFESERV WINS

Six reasons we're the obvious choice

Built from the ground up for independent venues, not enterprise chains.

1

All-in-one

Compliance + workforce in one platform. No more paying for Trail AND Deputy AND RotaCloud.

2

Indie-friendly pricing

£5/mo is impulse-buy territory. Pro at £25 replaces £75+ in combined tools.

3

No hardware lock-in

Runs on any phone or tablet. Zero upfront cost. No Bluetooth probes required to get started.

4

Actually works offline

Kitchens have poor signal. Basements have none. SafeServ caches data and syncs when connected.

5

10-minute setup

Onboarding wizard auto-configures by venue type. Staff added with name + PIN. No training needed.

6

Staff actually use it

PIN login, permission-aware dashboards, quick actions. Staff see only what they need.

Ready to see SafeServ in action?

Book a 15-minute demo and we'll show you how it works for your venue.
